

Assignment: Numbers and Strings Practice

Objective: Reinforce understanding of Python data types and conversions.

Tasks: 1. Create variables for an integer, float, and string, and print their types. 2. Convert the string '100' to an integer and add it to another number. 3. Write code to accept a user's name and age (as strings) and print a greeting converting age to an integer.

Save as 'assignment2.py'. Include comments explaining conversions.
