

Assignment: Module Practice

Objective: Understand the use of Python modules and packages.

Tasks: 1. Create a custom module 'greetings.py' with a function `hello(name)`. 2. Import and use it from another file. 3. Use built-in 'math' and 'random' modules in your program. 4. Explore `os` module to print the current working directory.

Save as 'assignment13.py'. Ensure your module runs without errors.
